GOVERNED PERSONAL INTELLIGENCE

The personal intelligence OS with governance built in.

Persistent memory. Autonomous agents. Human approval gates. One runtime.

DIFFERENTIATORS

What makes this different

- Adaptive Intelligence Loop that calibrates expert weights and compounds learning across every session.
- Constitutional governance via Sentinel -- safety constraints enforced at the architecture level, not bolted on.
- Local-first, Mac Mini-native runtime. No cloud dependency, no latency, no vendor lock-in.
- Three-layer context architecture with progressive disclosure that scales as complexity grows.
- Human-authority-final design. Every consequential action requires explicit approval before execution.

RESEARCH NOTES MIND MAP MEMORY CANON

RESEARCH PIPELINE

1 INGEST — Bookmarks, feeds, documents

2 ANALYZE — Extract themes, classify

3 SYNTHESIZE — Briefs, threads, insights

All | Research | Analysis | Synthesis

RESEARCH
X Bookmark Ingestion
Automatically ingest and classify bookmarks from X/Twitter into research categories.

RESEARCH
Web Research Agent
Deploy research agents to gather information on any topic with source verification.

ANALYSIS
Market Intelligence
SMC/ICT analysis: order blocks, fair value gaps, break of structure, liquidity sweeps.

ANALYSIS
Competitive Analysis
Track competitor positioning, pricing, and product changes across your market.

SYNTHESIS
Content Generation
Transform research into threads, newsletters, and posts with voice compliance.

SYNTHESIS
Research Briefs
Generate executive summaries from multiple sources with key findings and actions.
